HTML5 CSS3 JavaScript jQuery

Back-end & Integration

C# Asp.Net MVC / Razor node.js perl mod_perl MySQL Postgres SQL Server Mongodb Redis

Systems & Servers

Linux / *nix Apache Nginx Cacti Nagios

Others

git subversion TFS

WORK EXPERIENCE

2008 | Present

Examinetics, Inc

Software Engineer / Web Developer

Maintained a legacy perl + Mason + MySQL application that managed and reported on client's employee health information.

2008 | 2006

Sprint

Software Developer

Worked with a team of perl developers to create a scaleable data processing and reporting system for information on field devices.
System had to handle several million files daily, coming from many different systems around the nation. Data was highly volatile and required by many other groups for planning field upgrades and managing resource demands at the cell tower level. Other duties included requirements gathering and project planning.
